

Chips, what?

*An introductory course on electronic system design
for high school students: no prior knowledge required*

Who is this for?

High school students with
no prior background in
electronics or circuit design.
Curiosity is the only prerequisite.

What does it offer?

A **20-hour journey** from the basics
of circuit design to building
a first working system —
and discovering the heart of
everyday devices.

What you will do*

- ▶ Introduce basics on electronic design
- ▶ Lead classes to a small group of students
- ▶ Spark curiosity
- ▶ Bring them your own experience of university student
- ▶ Enrich your own cv by adding teaching experiences
- ▶ Work in a team

**After an initial short onboarding phase on the material and tools*

Course topics

- ▶ Introduction to electronic circuits
- ▶ Digital design fundamentals
- ▶ Design flow & EDA tools
- ▶ System-on-a-Chip design
- ▶ Hands-on design lab

All course material is available, in English, and it has been used to deliver three editions.

Requirements

Electronics Engineering or Computer Science and Engineering MSc

- ▶ Digital Design course
- ▶ Digital Design Project course
