

Chips, what?

An introductory course on electronic system design for high school students: no prior knowledge required

> **READY-TO-USE COURSE PACKAGE**

// THE COURSE

Who is this for?

High school students with **no prior background** in electronics or circuit design. **Curiosity** is the only prerequisite.

What does it offer?

A **20-hour journey** from the basics of circuit design to building a first working system – and discovering the heart of everyday devices.

20
course
hours

// THE PACKAGE

Everything you need to run the course

The course material is fully available in English, battle-tested across three editions, and ready to deploy. It includes lecture slides, lab exercises, and instructor guidance. You can focus on inspiring students, not on building content from scratch.

// COURSE TOPICS

- ▶ Introduction to electronic circuits
- ▶ Digital design fundamentals
- ▶ Design flow & EDA tools
- ▶ System-on-a-Chip design
- ▶ Hands-on design lab

Recommended profile for instructors

The course is designed to be delivered by:

- ▶ High-school / university professors
- ▶ Graduates with BSc or MSc in Electronic Engineering or Computer Engineering
- ▶ Background in Logic Networks / Digital Design
- ▶ Experience with EDA tools
- ▶ Enthusiasm for outreach and teaching – the most important requirement
